Education

Istanbul Technical University
Earthquake Engineering (MSc.)

Sakarya University
Civil Engineering (BSc.)

Skills

- TypeScript · JavaScript
- Node.js · Express · Bun
- PostgresQL · SQLite · MongoDB
- React · HTML · CSS
- Vite · Tanstack · TailwindCSS
- Turborepo · Redis · Docker · S3

Languages

- English
- Turkish

Publications

Soil–Structure Interaction
Consideration for Base Isolated
Structures under Earthquake
Excitation

MDPI Buildings

18 Citations. Developed custom software for the research paper.

Summary

Systems-focused Full-Stack Developer with expertise in React, TypeScript, Node.js, and modern runtimes like Bun. Experienced in architecting complex monorepos, data-heavy decoupled architectures, and real-time interactive systems. Combines strong foundational engineering principles with modern AI tooling to accelerate development cycles and rapidly deliver features without compromising code quality. Passionate about end-to-end type safety, robust database design, and streamlined DevOps via Docker and automated CI/CD.

Projects

Automated Price Tracking Platform | TypeScript, React, Node.js/Bun, TimescaleDB, Redis, BullMQ, Turborepo, Docker

- Engineered a distributed data-ingestion pipeline leveraging robust background job queues (BullMQ via Redis) and resilient web scrapers to reliably extract, process, and synchronize product pricing data at scale.
- Architected a high-performance time-series database utilizing TimescaleDB (PostgreSQL), optimizing schemas and indexes to efficiently store, aggregate, and query heavy volumes of historical price fluctuations.
- Developed a highly interactive React client utilizing TypeScript for strict end-to-end type safety, enabling users to visualize complex pricing trends through charts.
- Automated multi-service deployment by containerizing the architecture using Docker Compose, seamlessly orchestrating isolated environments for the API, scraping workers, cache, and database on a Linux VPS.

[Github Repository](#)

Social Media Platform | TypeScript, React, Node.js/Bun, PostgreSQL, Redis, Turborepo, Docker

- Engineered a highly scalable social platform deployed as a Turborepo monorepo, achieving end-to-end type safety from the Node.js/Bun API down to the React client.
- Architected a resilient backend ecosystem, leveraging PostgreSQL and Drizzle ORM for primary data, WebSockets for live notifications, Redis for high-speed caching, and S3 for media storage.
- Orchestrated complex production deployments utilizing Docker Compose to manage databases, cache layers, and heavily optimized multi-stage container builds on a Linux VPS.

Experience

Freelance Client (Restaurant Industry) Siem Reap, KH (Remote)
Frontend Developer May 2024

Built a responsive and interactive menu application for in-restaurant customer use. Implemented using React with TypeScript, Vite, and Tailwind CSS, featuring category-based navigation and fast client-side routing. Optimized for mobile devices and deployed on static hosting platforms.
